DAYLESFORD SECONDARY COLLEGE
SUNSMART POLICY

Rationale
A healthy balance of the sun’s ultraviolet (UV) radiation exposure is important for health. Too much UV from the sun can cause sunburn, skin damage, eye damage and skin cancer. Australia has one of the highest rates of skin cancer in the world. Two in three Australians will develop some form of skin cancer before they reach the age of 70. Overexposure to UV during childhood and adolescence is known to be a major cause of skin cancer.

Sun protection is needed whenever UV levels reach three and above. In Victoria average UV levels are three and above from the beginning of September to the end of April. During these months particular care should be taken during the middle of the day between 10am – 3pm when UV levels reach their peak.

Too little UV from the sun can lead to low vitamin D levels. Vitamin D regulates calcium levels in the blood. It is also necessary for the development and maintenance of healthy bones, muscles and teeth. From May to August in Victoria, average UV levels are below three so sun protection isn’t usually needed during these months unless in alpine regions or near highly reflective surfaces such as snow or water.

Objectives
The objectives of this UV radiation policy are to:
- Ensure that all students and staff maintain a healthy UV exposure balance.
- Encourage the entire school community to use a combination of sun protection measures whenever UV Index levels reach 3 and above.
- Encourage safe UV exposure whenever UV Index levels are below 3.
- Work towards a safe school environment that provides shade for students, staff and the school community at appropriate times.
- Assist students to be responsible for their own sun protection.
- Ensure that families and new staff are informed of the school’s UV radiation policy.

From September to April in Victoria
When average UV Index levels reach 3 and above.

Shade
- The school council/board ensures shade is available in the school grounds particularly in areas where students congregate – for example, lunch areas, canteen, outdoor lesson areas.
- The school council/board ensures shade provision is considered in plans for future buildings and grounds.
- Processes for the planning of outdoor activities and excursions include the consideration of shade.
- Students are encouraged to use shade when outside particularly if they are not wearing appropriate hats or clothing.

Clothing, hats and sunglasses
- The summer uniform/dress code includes a shirt with at least elbow length sleeves and a collar that sits close to the neck, above the collarbone.
- The summer uniform/dress code includes longer style skirts/shorts/pants at least to the knee.
- The sport uniform/dress code includes a shirt that covers the shoulders well and a collar that sits close to the neck, above the collarbone.
- Students and staff are encouraged to wear hats that protect their face, neck and ears (i.e. broad brimmed or bucket hats) whenever they are outside. During sports classes, baseball caps are worn where a broad brimmed or bucket hat may be impractical.
- The sport uniform/dress code includes longer style skirts/shorts/pants at least to the mid-thigh.
• Rash vests or T-shirts are recommended for outdoor swimming, when students are waiting to compete.
• Students and staff are encouraged to wear close fitting, wrap-around sunglasses that meet the Australian Standard 1067 (Sunglasses: Category 2, 3 or 4) and cover as much of the eye area as possible.

Sunscreen
• SPF 30+ broad spectrum, water resistant sunscreen is available for staff and students’ use and students are encouraged to bring their own sunscreen to school.
• Staff to encourage students to use sunscreen and provide time for students to apply sunscreen before going outside.
• The school community is educated about the correct use of sunscreen and the level of protection it provides.

Scheduling
• This policy is considered in the planning of all outdoor events such as assemblies, camps, excursions and sporting events.
• Where possible, outdoor activities/events will be scheduled earlier in the morning or later in the afternoon, or indoor venues will be considered.

Role modelling
• Staff are encouraged to act as role models by using a combination of sun protection measures (sun protective clothing and hats, sunglasses, sunscreen and shade) when outside.
• Families and visitors are encouraged to use a combination of sun protection measures (sun protective clothing and hats, sunglasses, sunscreen and shade) when participating in and attending outdoor school activities.

From May to August in Victoria
When average UV Index levels are below 3.
• To help maintain winter vitamin D levels, sun protection measures are not used from May until August unless the UV Index level reaches 3 and above.
• Sun protection measures are only required when in alpine regions or near highly reflective surfaces such as snow or water.

Curriculum
• Educational programs on skin cancer prevention and maintaining vitamin D levels are incorporated into appropriate areas of the school curriculum. Currently Year 7.
• Students are encouraged to be involved in initiatives to promote appropriate UV exposure measures to the whole school community.
• Appropriate UV exposure measures are regularly reinforced and promoted to the whole school community through a variety of channels such as newsletters, staff meetings and school assemblies.

Professional development for staff
• Appropriate UV exposure measures are included in staff training to enable staff to work safely outdoors and to encourage them to be positive role models.
• Appropriate UV exposure measures are included in staff booklets.
• New staff are to be given a copy of this policy.

Review of policy
• The school council, staff and SRC regularly monitor and review the effectiveness of the UV radiation policy (at least every three years) and revise the policy when required.
Next policy review: November 2010
